

## Ubuntu USB Installer

Step 1. download Ubuntu 12.04 [final release](#)

Step 2. Make the usb installer according following the tutorial from [ubuntu website](#).

Step 3. During installation, you need to set the partitions for the system, for efficiently manage SSD HDD, you need to **leave 7% of the SSD space to be unallocated**. Twice space of RAM as Swap, then set the mount point. The format of the hard disk is EXTxxxx (the first option).

Step 4. Then select the mount point as “/” for home folder, and if you have other partitions (e.g. another partition or another hard disk), set the mount point, and give a name, like “/data”. In this way, when you start the ubuntu, you can access to the hard disk using “\$ /data/...”

Step 5. Start installing the ubuntu, when finish, you will see a window requires restart the computer.

Step 6. Update the softwares, and restart. Done!
